

TECHNOCRATS INSTITUTE OF TECHNOLOGY-MBA

By AICTE New Delhi & Govt. of Madhya Pradesh
Affiliated To Barkatullah University, Bhopal
Anand Nagar, P.B. No. 24, Post Piplani, BHEL, Bhopal-462021
Ph. No.- 2752523, Fax- 0755-2751679, E-mail: titmba2003@gmail.com, Website: <http://technocratgroup.edu.in>

Institute:	TECHNOCRATES INSTITUTE OF TECHNOLOGY- MBA
Branch:	MANAGEMENT
Semester:	THIRD SEMESTER
Session:	2025-26
Subject Name:	Enterprise Resource Planning
Subject Code:	MOM-3
Faculty Name:	Dr. Ashok Soni

INDEX

UNIT	TOPIC	PAGE NO
UNIT 1:		2-4
	Enterprise Resource Planning – Introduction, What is ERP?, Need of ERP, Advantages of ERP, Growth of ERP	
UNIT 2:		4-7
	ERP and Related Technologies: Business Process Reengineering (BPR), Management Information System (MIS), Decision Support Systems (DSS), Executive Support Systems (ESS), Data Warehousing, Data Mining, Online Analytical Processing (OLTP), Supply Chain Management (SCM), Customer Relationship Management (CRM)

4. ERP – By Leon

UNIT 1: Introduction to Enterprise Resource Planning (ERP)

1.1 Introduction to ERP

Enterprise Resource Planning (ERP) is a transformative concept in modern business management. It refers to a suite of integrated applications that organizations use to manage day-to-day business activities such as accounting, procurement, project management, risk management, compliance, and supply chain operations. A complete ERP system also includes enterprise performance management software that helps plan, budget, predict, and report on an organization's financial results.

ERP systems unify various business processes by consolidating data into a single database and providing a consistent user interface across modules. This integration facilitates information flow between all business functions and manages connections to outside stakeholders.

1.2 Definition of ERP

ERP can be defined as:

“A software architecture that facilitates the flow of information among all functions within an enterprise and manages connections to outside stakeholders.”

It is a centralized system that automates core business processes, ensuring that data entered in one part of the system is immediately available to other parts of the organization.

1.3 Need for ERP in Modern Organizations

Modern organizations operate in complex environments characterized by globalization, competition, and rapid technological change. The need for ERP arises from several challenges:

- **Fragmented Systems:** Traditional systems operate in silos, leading to duplication and inconsistency.
- **Data Redundancy:** Multiple entries of the same data across departments.

- **Lack of Real-Time Information:** Delays in accessing accurate data hinder decision-making.
- **Inefficient Processes:** Manual workflows are time-consuming and error-prone.
- **Compliance Requirements:** Regulatory standards demand accurate and timely reporting.

ERP addresses these issues by offering a unified platform that integrates all business functions.

1.4 Advantages of ERP Systems

ERP systems offer numerous benefits that enhance organizational efficiency and competitiveness:

1.4.1 Integration of Business Processes

ERP integrates all departments and functions across a company into a single system. This integration ensures consistency and accuracy in data across the organization.

1.4.2 Improved Productivity

Automation of routine tasks reduces manual effort, allowing employees to focus on strategic activities.

1.4.3 Better Decision-Making

Real-time access to data enables informed decision-making and quick responses to market changes.

1.4.4 Enhanced Customer Service

ERP systems improve order processing, inventory management, and customer relationship management, leading to better service delivery.

1.4.5 Cost Reduction

By streamlining operations and reducing redundancies, ERP systems help lower operational costs.

1.4.6 Scalability

ERP systems can scale with the growth of the organization, accommodating new processes, departments, and geographies.

1.5 Growth and Evolution of ERP

The evolution of ERP has been marked by significant milestones:

Era	Development
1960s–70s	Introduction of Inventory Control and Material Requirements Planning (MRP).
1980s	Manufacturing Resource Planning (MRP II) added production planning and scheduling.
1990s	Emergence of ERP systems integrating finance, HR, and operations.
2000s	Web-enabled ERP and cloud computing revolutionized accessibility.

Era Development

2010s–Present Integration with AI, IoT, and mobile platforms; modular and industry-specific ERP solutions.

ERP has evolved from simple inventory systems to complex, cloud-based platforms that support global operations.

UNIT 2: ERP and Related Technologies

2.1 Business Process Reengineering (BPR)

BPR is the fundamental rethinking and radical redesign of business processes to achieve dramatic improvements in critical performance measures such as cost, quality, service, and speed.

2.1.1 Role in ERP

ERP implementation often requires BPR to align business processes with the system's capabilities. Without reengineering, ERP may automate inefficient processes.

2.1.2 Steps in BPR

- Identify processes to be redesigned.
- Analyze existing processes.
- Design new processes.
- Implement changes.
- Monitor and optimize.

BPR ensures that ERP systems deliver maximum value by streamlining workflows.

2.2 Management Information Systems (MIS)

MIS refers to systems that provide managers with tools to organize, evaluate, and efficiently manage departments.

2.2.1 Features

- Routine reporting
- Data summarization
- Performance tracking

2.2.2 ERP Integration

ERP systems include MIS functionalities, offering dashboards and reports that support operational management.

2.3 Decision Support Systems (DSS)

TECHNOCRATS INSTITUTE OF TECHNOLOGY-MBA

By AICTE New Delhi & Govt. of Madhya Pradesh
Affiliated To Barkatullah University, Bhopal
Anand Nagar, P.B. No. 24, Post Piplani, BHEL, Bhopal-462021
Ph. No.- 2752523, Fax- 0755-2751679, E-mail: titmba2003@gmail.com, Website: <http://technocratsgroup.edu.in>

DSS are interactive software-based systems intended to help decision-makers compile useful information from raw data, documents, personal knowledge, and business models.

2.3.1 Components

- Database
- Model base
- User interface

2.3.2 ERP Role

ERP systems support DSS by providing real-time data and analytical tools for strategic decisions.

2.4 Executive Support Systems (ESS)

ESS are designed for senior executives to facilitate strategic decision-making. They provide easy access to internal and external information relevant to organizational goals.

2.4.1 Features

- High-level summaries
- Trend analysis
- KPI dashboards

2.4.2 ERP Integration

ERP systems offer ESS modules that present critical data in visual formats for executive review.

2.5 Data Warehousing

A data warehouse is a central repository of integrated data from one or more disparate sources. It stores current and historical data and is used for creating analytical reports.

2.5.1 Characteristics

- Subject-oriented
- Integrated
- Time-variant
- Non-volatile

2.5.2 ERP Connection

ERP systems feed data into warehouses for reporting and compliance purposes.

2.6 Data Mining

Data mining is the process of discovering patterns and relationships in large datasets using statistical and computational techniques.

2.6.1 Applications

TECHNOCRATS INSTITUTE OF TECHNOLOGY-MBA

Ph. No.- 2752523, Fax- 0755-2751679, E-mail: titmba2003@gmail.com, Website: <http://technocratsgroup.edu.in>

- Customer segmentation
- Fraud detection
- Market analysis

2.6.2 ERP Usage

ERP systems use data mining to uncover insights that improve business performance.

2.7 Online Analytical Processing (OLAP)

OLAP enables users to analyze multidimensional data interactively from multiple perspectives.

2.7.1 Features

- Slice and dice
- Drill-down
- Roll-up

2.7.2 ERP Integration

ERP systems incorporate OLAP tools for advanced data analysis and reporting.

2.8 Supply Chain Management (SCM)

SCM involves managing the flow of goods, information, and finances related to a product or service from origin to consumption.

2.8.1 Components

- Procurement
- Production
- Distribution
- Logistics

2.8.2 ERP Role

ERP systems include SCM modules that optimize inventory, vendor relations, and delivery schedules.

2.9 Customer Relationship Management (CRM)

CRM refers to practices, strategies, and technologies used by companies to manage and analyze customer interactions and data throughout the customer lifecycle.

2.9.1 Objectives

- Improve customer service
- Increase sales
- Retain customers

2.9.2 ERP Integration

ERP systems offer CRM modules that track customer interactions, automate marketing, and manage service requests.

Conclusion

Enterprise Resource Planning is a cornerstone of modern organizational infrastructure. It integrates diverse business functions into a unified system, enabling efficiency, transparency, and strategic agility. The related technologies—BPR, MIS, DSS, ESS, OLAP, SCM, and CRM—enhance ERP's capabilities, making it a powerful tool for managing complex enterprises.

Together, Units 1 and 2 provide a foundational understanding of ERP systems and their technological ecosystem. This knowledge is essential for students, administrators, and professionals involved in business process management, IT implementation, and strategic planning.
